25,000 @ \$3.52/bag

Stainless Steel Wool is widely used for preventing rodents and pests from entering homes and businesses through gaps, cracks, and holes. Manufactured in a proprietary process that stitches multiple layers of 100% coarse stainless steel wool together. Stainless Steel Wool is rust free, **unlike** other rustable steel wool products found in hardware stores. When properly installed, it forms a protective barrier that is virtually impassable by rodents, bats, scorpions, lizards, and other pests. Very easy to install and it is also environmentally friendly, meaning no more harmful pesticides, chemicals, or poisons.

- Eco-Friendly
- No Killing & No Mess
- Easy Installation
- Rust Free - No Stains

Applications:

- Weep holes
- Gaps around pipes , wires, and cords passing through walls
- Outside electrical conduit that will allow rats or mice to enter and chew away the wires
- Cracks between foundation and sill plates
- Gaps in concrete walls, ceilings , and floors
- Other openings in homes, businesses , and storage facilities

Any hole as small as 1/4" in diameter could be an entry point for a mouse or other creature!

2 pad Bag: (approx. 30 g)
